

HEALTHY
SITE ALLIANCE

SILICA LOW RISK SITE

This site is managed to keep silica work low risk where possible.

- All silica work must use effective controls to remain low risk.
- Report potentially high risk activity to Site Team before starting.
- Follow site silica control requirements at all times.

LOW RISK SITE REQUIREMENTS

Effective silica controls in use

Low risk work methods where possible

High risk work reported before starting

Site rules followed at all times

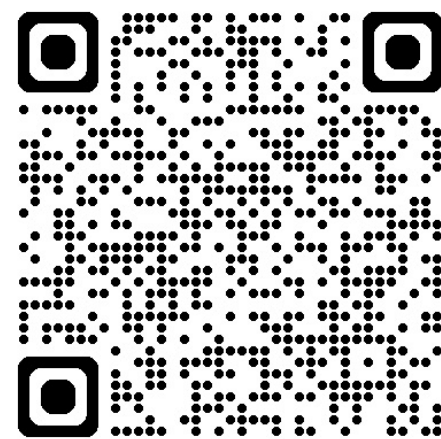

Control issues raised immediately

This site is managed as low risk only when specified controls are correctly implemented and maintained. Contractors remain responsible for ensuring controls are in place and effective at all times.

Work must stop if controls are not working or conditions change.
